

partmaster

INDUSTRY
MORE THAN PARTS

Partmaster started business as an engineering firm and manufacturer of agricultural machinery, trading as Falcon Engineering. While creating an efficient parts logistics system for its own machines, Falcon recognised a growing need in the farming community for a reliable source of supply that could provide the parts required for other brands of farm equipment. Eventually a separate parts division was formed, an extensive dealer network was established and the variety of parts grew to cover a wider and wider range of equipment.

A partnership was formed with the international parts suppliers, The Kramp Group. This meant that the venture now had access to the enormous range of parts (more than 100 000 items) supplied by Kramp, sourced from the world's leading manufacturers. The scale of the Kramp operation meant that the best quality parts were available at very competitive prices.

Kramp South Africa is now 100% South African and in 2004 the name was changed to **Partmaster**. The growth of the Hydraulics and Transmission product categories has allowed **Partmaster** to evolve into the Industry sector in the form of **Partmaster Industry**. This is a specialised business unit focusing on these technical products for the end user market. During the latter part of 2005, the company **ARG Transmission I (Pty) Ltd** merged with Partmaster Industry, to provide a springboard into the Industrial sector.

the best quality parts at
very competitive prices . . .

TRANSMISSION

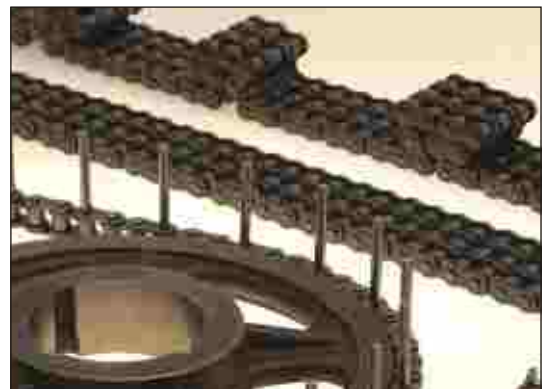

The Transmission division includes bearings, V-belts and pulleys, seals, transmission and conveyor chain, gearboxes, electric motors and PTO drive shafts and components.

HYDRAULIC COMPONENTS

The Hydraulics division of **Partmaster** has experienced exceptional growth. A vast range of hydraulic pumps, motors, valves, hose and fittings is stocked and the personnel in this department have the expertise to tackle all types of hydraulic installations.

WORKSHOP FACILITY

Partmaster is able to offer its customers a manufacturing and assembly facility. Hydraulic components, which need to suit particular requirements in the field, such as unusual operating valve sets and special pump or motor configurations, can be assembled to order by the technical team.

assembled to order...

Partmaster

Partmaster is the name for a business that is well established as a reliable and efficient supplier. A firm with a remarkable record of growth based on the mission of the company, which is, "To exceed the expectations of all our customers!"
